## **Proactiv+ 3 Step Clear Skin System bares technology**

PROACTIV+ 3 Step Clear Skin System has Smart Target technology that delivers acne-fighting formulation directly into the pores. The 3-step system starts with a Smoothing Exfoliator facial cleanser which removes excess dirt and other impurities. The exfoliator is applied on damp skin and rinsed with warm water after two minutes. The second step is called the Pore Targeting treatment. It stops the acne at the source because it delivers blemish-fighting ingredient directly into the pore. The lotion is applied all over face to allow full absorption. The final process of the Proactiv+ 3 Step Clear Skin System hydrates the skin with the Complexion Perfect Hydrator. The moisturizer will reduce redness, help lighten acne marks and help brighten skin.
